EDUCATION

Bachelor of Technology, NIT Srinagar
Information Technology : 7.49 CGPA

Srinagar, Jammu & Kashmir
2019-2023

High School, Harihar Singh Academy
Science (Math) : 80.6%

Tisaura, Choolapur, Varanasi
2016-2018

SKILLS

Programming Languages	C++, Java, Javascript
Frameworks	Node.js, Express.js, React.js, Spring Core, React Native
Tools & Technologies	AWS, Kafka, Git, Github, VS Code, Jenkins, Nginx
Soft Skills	Data Structures, OOPS, DBMS
Coding Profiles	Leetcode (400+ solved), GFG ,

EXPERIENCE

Associate Software Engineer
Zetwerk

Nov 2023 - Present
Bangalore, India

- Added Excel Download/Upload functionality with Header transform using batch processing.
- Optimised DB performance by doing batch processing and async parallel limit(performance improved by 40%).
- Created Data Sync Service(including schema design) between Postgres and mongoDB(84000 records sync in 1min). The service syncs analytics data(postgress db) to ZOS(mongoDB), which helped in taking better business design. Some of the features are - Real Time Sync, Reconciliation, Historical Load.
- Developed Notification service and sdk(npm library) to send notification using firebase, maintaining all notifications in DB. Used kafka for managing large no. of concurrent notifications over 100/s and than storing notifications every 5min.

SDE Intern
Cootz

Jan 2022 - June 2022
New Delhi, India

- Developed a Admin panel using React JS for Cootz, enabling them to efficiently create and update their contests while managing all associated details, reducing management time by 50/
- Used React Native to develop a comprehensive set of components and screens for the Cootz Free application. These elements were integrated with the backend system to ensure smooth functionality and optimal user experience. Got 75000+ downloads on playstore

PROJECTS

Resume Builder - [Joblient](#) (08/2023 - Present) My resume builder offers real-time customizable templates optimized for ATS systems, with instant previews to help users refine their resumes. It also provides AI-driven suggestions for improving project descriptions and correcting grammatical errors. The app runs entirely within the user's browser to ensure data privacy and security.

Contacts App for Android/ios (09/2023 - 09/2023) Implemented a robust contact grouping system that allows users to categorize contacts into custom groups, enhancing organization and usability. Designed an intuitive interface for creating, renaming, and deleting contact groups, making it easy for users to manage and assign contacts to specific groups. ([Github Link](#))

Blockchain Based E-Parking (02/2023 - 06/2023) - Developed a web 3 app called "Blockchain-based E-Parking" using MetaMask, Node.js, React.js, and Solidity. Integrated Google Maps API to display nearby parking spots on the map, allowing users to view available slots and book them by paying Ethereum. ([Live Demo](#)) ([Github link](#))
